

Migrate from TIBCO to Boomi

Confidently Modernize with AI

Seamless. Strategic. Future-Ready.

If you're using TIBCO, you've probably hit a few walls and upgrading is costly plus time-consuming. There's no clear roadmap for the platform, and finding people with the right skills is getting harder.

Boomi gives you a more flexible, modern option—but switching over isn't a simple lift-and-shift.

- Some of your TIBCO logic is complex and needs to be untangled
- Not everything moves over smoothly; it takes careful handling
- Moving forward with a modern integration platform adds opportunity
- Ensure your existing TIBCO team has a place on the new platform
- And above all, the business can't stop while all this is happening

We help you tackle all of it—step by step.

Discovery & Planning

We take a close look at your current setup, then build a clear plan, with team training and a few test migrations to get started.

Architecture & Readiness

We design your future setup, validate key tech pieces, and prep your team, with automation, testing, and support in place.

Iterative Migration

We turn plans into action, migrating in sprints, testing thoroughly, and making sure your team has the docs and support they need.

Powered by Boomi. Delivered by Bits In Glass.

As a certified Boomi Partner, we bring expertise, structure, and a practical migration playbook, built for enterprise scale.

Phased. Proven. Practical.

The BIG Approach to a Successful TIBCO Migration

Step 1 (1 – 2 weeks)

We start by listening.

- Align with key stakeholders
- Clarify business, technical, and financial goals

Step 2 (2–4 weeks)

Dig in, map out, and get a clear picture.

- Technical discovery and map/audit existing scope
- Catalog & document existing integrations using BIG TIBCO Requirements AI
- Identify major risks, dependencies, and opportunities
- Develop a training/reskilling plan for your existing TIBCO team
- Build a migration plan and business case
- Deliver a proof of concept subset: 1 small, 1 medium, 1 large conversion

Step 3 (Variable)

Design the path forward.

- Design the new architecture and prove key technical components of the plan
- Consider an automation strategy that adds value
- Begin reskilling and backfilling your TIBCO team
- Launch a Hypercare hybrid team to support live operations
- Define your migration approach and create the plan

Step 4 (Variable)

Turn plans into production.

- Perform iterative transition sprints from TIBCO into Boomi
- Accelerate migration using BIG Migration AI
- Enable knowledge transfer & documentation
- Perform performance & load testing and support sprint UAT & Go-Live
- Define and create documentation, run books, specifications or support guides

Step 5 (2 weeks)

Support doesn't stop when you launch.

- Manage hypercare for 2 weeks
- Full handoff to our Application Management Services or your internal team
